

Satellite-based Estimates of Sea Ice Volume Flux: Applications to the Fram Strait Region

Filesize: 1.32 MB

Reviews

Absolutely essential read through book. it was actually writtern quite properly and useful. Its been developed in an remarkably basic way and it is only following i finished reading through this ebook where really changed me, modify the way i believe.

(Torrey Jerde)

SATELLITE-BASED ESTIMATES OF SEA ICE VOLUME FLUX: APPLICATIONS TO THE FRAM STRAIT REGION

To get **Satellite-based Estimates of Sea Ice Volume Flux: Applications to the Fram Strait Region** eBook, remember to refer to the button below and save the document or gain access to additional information that are related to SATELLITE-BASED ESTIMATES OF SEA ICE VOLUME FLUX: APPLICATIONS TO THE FRAM STRAIT REGION ebook.

GRIN Verlag Aug 2008, 2008. Taschenbuch. Book Condition: Neu. 297x210x15 mm. This item is printed on demand - Print on Demand Neuware - Doctoral Thesis / Dissertation from the year 2008 in the subject Geography / Earth Science - Physical Georgraphy, Geomorphology, Environmental Studies, grade: 1,0, University of Hamburg (Institut für Meereskunde), 170 entries in the bibliography, language: English, abstract: The sea ice export out of the Arctic Ocean through Fram Strait into the Greenland Sea is the single largest source of freshwater in the Nordic Seas and therefore of spezial importance for the hydrological cycle of the North Atlantic. On its way south, the exported sea ice melts and thereby modifies the stratification of the ocean surface mixed layer, which in turn influences oceanic deep convection and water mass transformation processes in the Nordic Seas and thus impact global ocean thermohaline circulation. The lack of spatial sea ice thickness information has been one of the weaknesses for previous existing methods to determine the sea ice export. In this study a new method to obtain the sea ice volume flux exclusively from satellite measurements is presented. Previous estimates of the sea ice volume flux relayed on ice draft measurements of a single Upward Looking Sonar (ULS) in the Greenland Sea. The GLAS laser altimeter onboard the ICESat satellite launched in 2003 offers for the first time the opportunity to obtain the spatial sea ice thickness distribution up to 86°N latitude. In this study a method to determine the sea ice freeboard from ICESat altimeter data is developed and applied to nine ICESat measurement periods between 2003 and 2007. Assuming hydrostatic balance and by utilization of further satellite, in situ and climatological data these sea ice freeboard measurements are converted to sea ice thickness maps of the Fram Strait region. The...
