Set the cross hairs on the image of the slit and read the position of the telescope. Remove the prism and set the telescope upon the image of the slit seen directly. The angle through which the telescope has been turned is the angle of deviation of the light, in this case the angle of minimum deviation D . In the position of minimum deviation the light passes through the prism in a direction such that it makes equal angles with the surface of the glass in entering and in leaving. i z and r r Consider the small triangle formed by the three paths of the ray extended. From the property of the exterior angle of a triangle, D $(i-r)$ $(i-r) 2 i-2 r$. From the property of similar triangles...
